

SERVER INFORMATION

Serial Number:	_____	Server IP:	_____
SSID:	ion-<xx>	AP Password:	52235223
Web UI:	http://ion-<xx>.local or http://<server IP>		
TAK Server:	https://ion-<xx>.local:8444 or https://<server IP>:8444		
TAK Username:	administrator	TAK Password:	password

The TAK Server web UI is reached directly on port `8444` — it is **https**, and the certificate is self-signed, so your browser will show a warning the first time. Change the default password after signing in.

`<xx>` is the server's serial number with the leading zero dropped. It is **not** zero-padded in the AP IP address — for example, `ion-04` (hostname `ion-04.local`) has the AP IP `10.30.4.1`, not `10.30.04.1`.

SSH CREDENTIALS

Hostname:	ion-<xx>.local	Username:	natak
Password:	52235223		

Example: `ssh natak@ion-03.local`
