

SERVER INFORMATION

Serial Number: _____ AP IP: _____

SSID: `ion-<xx>` AP Password: `52235223`

Web UI: `http://ion-<xx>.local` or `http://<server IP>`

`<xx>` is the server's serial number with the leading zero dropped. It is **not** zero-padded in the AP IP address — for example, `ion-04` (hostname `ion-04.local`) has the AP IP `10.30.4.1`, not `10.30.04.1`. The AP IP is always `10.30.<xx>.1`; the server's LAN and Tailscale IPs are shown in the web UI.

SSH CREDENTIALS

Hostname: `ion-<xx>.local` Username: `natak`

Password: `52235223`

Example: `ssh natak@ion-03.local`
